💡 [PHP][Source Code]antirecaptcha

I've written a recaptcha distortion remover and now i'm able to download with jDownloader from HF and FS (and most likely from all other sites using reCAPTCHA).

source follows:

Code:

```
<?php
// anti-recaptcha v0.1 (c)opyleft 2010 http://wegeneratedv.de/arc *****
// *****
$contrast=128;
$scaling_factor=2;
$maxslope=-1;
$mid_exponential_smoothing_factor=0.2;
$vector_exponential_smoothing_factor=0.001;
$h2qx_commandline='hq2x.exe contrast.bmp resized.bmp';
$vietocr_commandline='VietOCR.exe out.jpg output';
$source_img=imagecreatefromjpeg("input.jpg");
// function imagecreatefrombmp *****
// *****
// save Bitmap-File with GD library
// written by mgutt of http://www.programmierer-forum.de/function-imagecreatef
// based on the function by DHKold of http://www.php.net/manual/de/function.im
if (!function_exists('imagecreatefrombmp')) { function imagecreatefrombmp($file
// version 1.00
if (!$fh = fopen($filename, 'rb')) {
    trigger_error('imagecreatefrombmp: Can not open ' . $filename, E_USER_
    return false;
}
// read file header
$meta = unpack('vtype/Vfilesize/Vreserved/Voffset', fread($fh, 14));
// check for bitmap
if ($meta['type'] != 19778) {
```

```

        trigger_error('imagecreatefrombmp: ' . $filename . ' is not a bitmap!')
        return false;
    }
    // read image header

```

the combined module for jDownloader can be downloaded [here](#).
hope u can use this stuff 😊

Thank you for this. Not trying to flame, but since you've posted it, Google will probably fix it very soon.

Thanks. What fraction of captchas can it decode?

if you mean by fraction which recognition rate it has: around 5%... thats not that much but i'm working on it. and should be enough if you use proxies because of the ~32 wrong guesses google gives you.

if they fix it, i got something to do - and lets be clear: i totally want them to get better, cause its the only spam stopping mechanism out there atm.

↓↓↓ ↓↓↓ ↓↓↓ ↓↓↓ ↓↓↓ ↓↓↓ ↓↓↓ ↓↓↓ ↓↓↓

it seems to me that the result is far from being impressive, not bad though

*it seems to me that the result is far from being impressive, not bad though*

thx for your reply! you're absolutely right, it could be far better - that's what i hope for. i haven't implemten all of [chad's algorithms](#) yet and the parameters

Code:

```
$contrast=128;
$maxslope=-1;
$mid_exponential_smoothing_factor=0.2;
$vector_exponential_smoothing_factor=0.001;
```

aren't the best fit by now. but i think it's a good point to start from.
but feel free to play around with them and post your results afterwards!

little update:

i get better results (around 9%) with these parameters:

Code:

```
$contrast=112;
$mid_exponential_smoothing_factor=0.1;
$vector_exponential_smoothing_factor=0.04;
```

Update to [v0.2a](#) available:

Changelog:

v0.2a

- recognition rate pushed to 10%
- multiple iterations to OCR ("best match")
- intersections between letters partially removed
- cleaned up sourcecode
- added support for these oneclick hoster:

combozip.com

cramit.in

crazyupload.com

drop.io

enterupload.com

extabit.com

[PHP][Source Code]antirecaptcha - The B...

Sorry I'm a noob here but can you explain me step by step what should I do to use it for a specific website.

Thanks 😊
